

GWS Introduction

The GWS (Global Web Station) enables all Bank of China correspondent Financial Institution account holders to view their account balance and transaction details in real time. GWS connects the clearing system of Bank of China New York – GPS (Global Payment System) in real time. The GPS is working in parallel with the two (2) U.S. main clearing systems, CHIPS and FEDWIRE, with 21.5 hours of daily processing. During this window, users can log into GWS remotely to view their account balance, transaction details and credit and debit processing status, to help improve their cash management accordingly.
